ConserveWell service utensil holders can help foodservice operators conserve water and save money. This solution replaces the traditional dipper well perpetual-flow sink used to rinse and protect service utensils against bacteria growth. The unit holds utensils at more than 140 degrees F, protecting from bacteria growth without the use of perpetually flowing water.

Part of the Breakfast Collection line, these snack/cereal dispensers are available in single, double or triple dispenser models. Dispensers stand 27 inches tall. Each polycarbonate cylinder has a 10-liter capacity, stainless steel base and dispensing wheel. The triple dispenser has a rotating chassis for easy dispensing. www.springusa.com

Tomlinson Industries

This line of high chairs and booster seats is made of environmentally sustainable hardwood. The C-30 and C-35 EF High Chairs feature solid 3/4-inch hardwood mortise-and-tenon frame construction; a large contoured seat; square front bar; instant-release safety straps, and radius edges to keep food from collecting. The chairs and seats stack and store easily. Four finishes are available, including natural, walnut, black and red mahogany. www.tomlinsonind.com

The Specification Series has three levels of product offerings for various design budgets. Features include interior LED lighting for energy-efficient illumination, optional tray slide and shelving kits, four cam lift hinges per door and a solid metal door handle for added durability, a centered dead-bolt style lock, and an electronic temperature control. An easy lift up, hinged lower grill provides quick access to the condenser coil for convenient cleaning. www.truemfg.com
