## WATER QUALITY STATEMENT

The fact that a water supply is potable is no guarantee that it is suitable for steam generation. All steam equipment is subject to contamination and failure due to chemical and mineral content found in water. A suitable Water Treatment System and regular filter replacements coupled with routine deliming is the recommended minimum. Damage as a result of poor water quality or lack of required owner/operator maintenance is the responsibility of the owner/operator.

Your water supply must be within these general guidelines:

<b>DYNAMIC WATER PRESSURE</b>	15-87 psi (30-60 recommended)
<b>HARDNESS*</b>	1 - 3 grains
<b>SILICA</b>	less than 13 ppm
<b>TOTAL CHLORIDE</b>	less than 30 ppm
<b>pH RANGE</b>	7-8
<b>CHLORINE &amp; CHLORAMINE</b>	0 ppm
<b>ALKALINITY</b>	less than 20 ppm
<b>TDS</b>	less than 60 ppm
<b>UN-DISSOLVED SOLIDS</b>	less than 5 microns

\* 17.1 ppm = 1 grain of hardness

Other factors affecting steam generation are iron content, amount of chlorination and dissolved gases. Water supplies vary from state to state and from locations within a state. Therefore it is necessary that the local water treatment specialist be consulted before the installation of any steam generating equipment.

## USER RESPONSIBILITY

The product must be installed, cleaned and maintained as described in the Manual furnished with the product. It is the responsibility of the owner and installer to comply with local codes.

Amperage values in the table are nominal. Tolerance is +/-10%. Always refer to the NEC, state and local codes.

## Service Connections

### Electrical

Field wire electrical connection. Ships as 208, 240, and 480V.

### Water

3/4" GHT-M (male garden hose) connection on the machine.

Note: water is a customer supplied utility that must meet the water specs of the machine.

### Drain

2" diameter
